Abstract: Organic Agricultural Products Selling website will provide a facility for farmers to sell their farm fresh organic products directly to the end users. Farmers can register and get authorized by admin to farmer's portal. Also, they can add their product details on portal and current price of that product will get fetched from central market of metropolitan city like Pune, Mumbai, Delhi. Customer will be able to contact directly to the Farmers and able to rate of products. In that the project website are totally useful for the farmer's and also customer. Increasing demand of farm products led farmers to use of chemical fertilizers/insecticides/pesticides and other chemical medicines to increase the production.

Keywords: Organic agricultural products, APMC, Online food delivery.

1. Introduction

Farm direct marketing involves selling organic agriculture product from the farm directly to customers. Often, the farmer receives a price similar to what the marketed grocery store charges. This method of marketing is more entrepreneurial or business-like than wholesale marketing. In a manner of speaking, the farmer using this method grows a "product" more than a crop. The opportunity to interact with growers is one of the reasons consumers like to purchase this way. The experience of the purchase of is often part of the product. As India is a country where more than 65% population is dependent on Agriculture and Agriculture related jobs. Maharashtra state government is working out changes in the Agricultural Produce Marketing Committee (APMC) Act. Here Organic Agricultural Product Selling Portal come to solve the problem. OAPSP will deal with issues in existing system and make their life easier.

Below are advantages to farm direct marketing:

- Since small quantities of farm products can be sold, small farm producers can participate.
- The farmer sets the price of product or is more control of the price of the product.
- Good products and services sense can get attractive prices and therefore, small farms can be profitable amount.
- Payment is usually immediately.
- In addition, farmers receive instant feedback from customers on products.
- The farmer can improve his/her business through this

2. Objectives of the Study

This study is limited to online organic agricultural products and its comparison with Indian farmers and the businessman. The main objectives are:

- 1. To explore the organic agricultural products at an all over India.
- 2. To investigate the trends of online organic agricultural products usage in India is more popular.
- 3. To analyze the online export of organic agricultural products from India.
- 4. To compare the production of organic agricultural products in other countries.
- 5. To predict future demands and their fulfilment strategies in India.

3. Research Methodology

This case study of the product is developed on the basis of secondary data. Published sources are taken into consideration for the analysis of the data. The information about the organic agricultural products and its farming practices in India and abroad is collected. The method for an Online organic product selling system is based on the farmer's farm product for directly marketed in the market. In that research of methodology of agricultural product based on agriculture farming products.

4. Result and Discussion

In that the Online Organic Agriculture product selling website are very useful for the farmers and also end user. In India Indian traditional farmers possess a deep insight based on their knowledge, extensive observation, perseverance and practices for maintaining soil fertility, the progress in organic agriculture is quite commendable. In discussion of that product for the farmer can easily export the product in market or home to home to end user. The product quality are good or bad are suggestion or compliant from the feedback form. This way of marketing the product are marketed easily.

5. Conclusion

Online Organic agriculture product supports to sustain

209

input and feedback of any product increase farm profitability.

economic condition of farmer better system and cycles. It also enhances and sustains the health of soil, human, animals, plants, and planet. With regard to the growth of organic products the main organic products which have been produced in India are basmati rice, fruits, oilseeds, sugarcane, pulses, dry fruits, vegetables, seeds, ketchups etc. Madhya Pradesh, Himachal Pradesh, Rajasthan and Maharashtra in India are popularly known for the highest amount of production of organic products. Growing awareness towards environmental issues, health consciousness, leading a healthy lifestyle, is mainly responsible for the higher demand for organic agricultural products. The attractive market and high profit margin have motivated many farmers to venture into organic farming. The highest amount of organic basmati, organic spices, and organic herbs are produced by Indian farmers and started earning profits.

Acknowledgement

I am using this opportunity to express my gratitude to everyone who supported me throughout the course of this project. I am thankful for their aspiring guidance, invaluably constructive criticism and friendly advice during the project work. I am sincerely grateful to them for sharing their truthful and illuminating views on few issues related to the project. I am very thankful to our project guide Prof. Solankar P.P. for her encouragement, technical support constant support and guidance at project.
